CohēCiv

Cyber Resilience for the People

Education and advising on personal and professional digital threat awareness and risk mitigation.

It's no secret – the threat of cybercrime and cyberattack is inherent while working in and navigating the digital environment.

- × In 2023, cybercrime cost Americans $12.5 billion, up 22% from 2022
- × Victims over 30 years old lost over $7.8 billion
- × By 2025, the cost of cybercrime is expected to reach $10.5 trillion globally

Understanding the urgency to address this problem, we aim to empower communities at every level to identify and defend against digital threats.

Who We Are

Dedicated and passionate educators and advisors with diverse backgrounds, from the defense and government sectors to the tech industry.

What We Do

We build courses to educate and equip the community with the skills and tools to combat digital threats and nefarious intent.

We leverage experience from supporting DoD and Government clients engaged in sensitive operations.

We focus on technical literacy and human behavior in the Ubiquitous Surveillance Ecosystem (USE), differentiating us from enterprise IT and Cybersecurity.

We provide the most updated information to increase overall situational awareness and the effectiveness of our digital threat mitigation strategies.

We Advise and Assist, utilizing both virtual and in-person interaction to deliver the necessary support, whether it's device configuration or digital risk management consultations.
